

Classwork 2: More Python Warm-Ups

In-class Date: Wednesday 4 February

Due Date: Wednesday 11 February

Objectives

To continue getting used to writing Python code. To learn how to use variables of different types in your Python programming.

Assignment:

Install Python (if you haven't already)

Ensure that Python with IDLE is installed on your computer.

Python and the IDLE Integrated Development Environment are available at <https://www.python.org/downloads/>.

Optionally, you may use PyCharm Community Edition available at

<https://www.jetbrains.com/pycharm/>,

or Google's interactive Python environment at <https://colab.research.google.com/>.

Starter Code & Assignment

Use the starter code below and follow the in-line instructions.

```
# Name : Alice Smith ( replace Alice's name with your name !)
```

```
# Part 1: Prompt the user for 4 words : a noun , a verb , an adjective ,  
9 # and a place . Then , display the words as a sentence .
```

```
noun = ???
```

```
verb = ???
```

```
adj = ???
```

```
place = ???
```

```
print (" Bring your " + ???)
```

```
# Part 2: As of July 2024 , the Voyager 1 spacecraft is about
```

```
# 24 ,447 ,732 ,226 kilometers from Earth . Radio transmissions are about
```

```
# the speed of light : 300 ,000 kilometers per second . Write code which
```

```
# calculates the estimated transmission time for one -way communication
```

```
# with Voyager 1 in hours . Your answer should be approximately 22.6 hours .
```

```
distance_over_speed = 24447732226.0/300000.0
```

```
# Convert from seconds to hours
```

```
# Print the result and include a description .
```

Reminder

Assignments are your own effort. Do not share your code.

Grading Rubric

Script prints:

- the sentence with user-provided words: 50 points.
- the transmission time between Earth & Voyager 1: 50 points.

What to Submit

Your saved Python script.
